1. General Electric Data Scrub Review

Mr. Greg Drake from the NYISO reported the results from the ICS MARS database inspection by Mr. Glenn Haringa from General Electric Energy, Software Products (GE). GE found 13 items of concern that may have an impact to the IRM. The group reviewed all these items and categorized them based on

their significance. The following are the item the group highlighted as most important:

- Item 4: Reserve Sharing. Based on the current program configuration all pools provide emergency assistance equally to all the pools when needed. GE pointed out that such arrangement is only among the NPCC members and does not include PJM. This statement was confirmed by group, therefore a priority emergency assistance should be setup in the database.
- Item 12: The PJM interface limits were partially updated. The group analyzed the previous MARS output results and determined that this finding would have a negligible impact on the already calculated IRM, but it will need to be corrected for completion.
- Item 13: A group of interfaces limit was set backwards, limiting emergency assistance into zone J from PJM. The group review whether these interfaces were reaching the maximum flows and determined that recalculating the IRM was necessary.

2. Sensitivity Cases

The group reviewed the latest results from the sensitivities and had the following observations of the results:

- Results don't change significantly when removing SCRs and EDRPs
- The methodology used to pick the higher and lower EFOR should be revised next year. The current methodology selects the lowest and the highest year EFORd for NYCA, but it does not assures that is the lowest or highest for each of the units or at least each of the areas.
- Methodologies used for Indian Point long outage and retirements should be explained in the body of the report or as a footnote of the table.
- The group couldn't find an explanation for the lower IRM results when using a different wind shape.

3. IRM Report

The group will provide comments before Wednesday, December 1st.

4. Action Items

Closed

111-2: Peter Carney completed the environmental write up.

Revised

All items reviewed.

New

118-1: ICS to explore the possibility of approving the assumption matrix a month earlier to perform data scrub earlier as well.

Secretary: Carlos Villalba
