NAESB Gas Electric Harmonization Forum Survey

Due February 27, 2023

Included:

Cover Page		Page 2
Section 1:	Submitter Information	Page 3
Section 2:	1 Measures to improve gas-electric information sharing for improved system performance during extreme cold weather emergencies	Page 4
	2 Measures to improve reliability of natural gas facilities during cold weather (freeze protection, electric supply) extreme cold weather events when natural gas heating load and natural gas-fired generators are both in high demand for natural gas, at the same time that natural gas production may have decreased	Page 12
	3 Measures to improve the ability of generators to obtain fuel during extreme cold weather events when natural gas heating load and natural gas-fired generators are both in high demand for natural gas, at the same time that natural gas production may have decreased	Page 16
	4 Recommendation 24	Page 24

February 8, 2023

Dear GEH Forum Participants,

Please find attached a survey/request for comments related to the priority of the recommendations included in the discussion paper that was reviewed during our last Gas-Electric Harmonization Forum meeting. As noticed, our next meeting has been rescheduled from February 23, 2023 to March 3, 2023 to provide participants with additional time to respond to this survey/request for comments. It is not necessary to submit a survey in order to participate in the meeting on March 3rd; however, the responses provided will be utilized to guide our discussions in future meetings and shape the direction of our final report. Given the size and complexity of the survey/request for comments and the need to organize the data contained in the responses, we are not utilizing the SurveyMonkey software and are requesting that all responses be submitted as Microsoft Word documents.

To respond to this survey/request for comments, please fill out this document, attach the requested documentation, and email it back to the NAESB office at naesb@naesb.org. Please note that this survey is quite lengthy, and it may take a significant amount of time to respond. We are requesting that participants respond to the three questions below for each of the recommendations contained in the categories provided by FERC and NERC Staff and included in the discussion paper previously sent out for comment and reviewed during our last meeting (<https://www.naesb.org/pdf4/geh020223a1.docx>).

1. Do you support or oppose taking action in response to the following recommendation?
2. Of the recommendations that you support, please rank the recommendations in order of the priority (1 – 10, as applicable) that they should be given to increase the reliability of the natural gas infrastructure system in support of the Bulk Electric System.
3. For the top three recommendations you support, please provide actions that can be taken to support the recommendation, identify the entity or entities that should be responsible for taking those actions, describe how those actions should be implemented and provide any related recommended deadlines. (Attach Documentation)

For question three, we ask that you attach documentation to your survey that provides responses to the question. As with all GEH Forum surveys, respondents are asked to identify with a NAESB Quadrant and Segment or as an observer when completing the survey/request for comments. A description of the NAESB Quadrant and Segments can be found through the following hyperlink:

https://www.naesb.org/pdf4/geh_balanced_voting_quadrant_segment_descriptions.doc.

Responses are requested by the close of business on **February 27, 2023**.

Thank you for your time and for your commitment to the GEH Forum –
