

# Energy Reliability Assessment Task Force (ERATF)

## Recent Activities: Updated Work Sheets Questionnaire

On June 15, the Energy Reliability Assessment Task Force (ERATF) met with the RSTC Engineering groups to review the questions that are in the questionnaire. Chair Brandien provided a summary of the issues being addressed by the task force based on the *Ensuring Energy Adequacy with Energy-Constrained Resources* white paper. Based on feedback from the RSTC Engineering groups, the questionnaire has been revised (link provide below).

The task force is working to seek consensus and direction on the best way to use the ERO tools to address reliability risks associated with unassured energy supplies. The unassured energy supplies are stemming from variability and uncertainty from renewable energy resources, limitations of the natural gas system and transportation procurement agreements, and other energy-limitations that inherently exist in the future resource mix.
