# Summer 2018 Capacity Assessment

Wes Yeomans
Vice President, Operations

**NYSRC Executive Committee Meeting** 

June 8, 2018

### **Highlights**

- This summer capacity assessment utilizes a "deterministic approach" for approximating capacity margins and operating reserves for baseline and extreme weather conditions.
  - NERC Standard TOP-002-2.1b Normal Operations Planning, Requirement 7: Each Balancing Authority shall plan and secure sufficient day ahead capacity to secure for the single largest contingency
  - The assessment utilizes a set of projected derates based on five-year EForD averages
- At <u>baseline peak weather conditions:</u>
  - +1,599 MW of capacity margin surplus, an increase of 1,214 MW over the baseline 2017 forecast. This is the projected capacity margin above the baseline peak load plus 2,620 MW of operating reserves.
- At <u>extreme weather conditions</u>: (90<sup>th</sup> percentile forecast):
  - -241 MW of capacity margin shortfall, an increase of 1,683 MW compared to the 2017 extreme weather forecast. This is the projected shortfall for the 90<sup>th</sup> percentile load plus 2,620 MW of operating reserves.

#### 2017 & 2018 Summer Capacity Assessment & Comparison

|           |   | 2017                         |                                     | 2018                         |                                     |

| 3 = 1 + 2 | Net Capacity Resources                                | 36,184                       | 36,184                              | 37,123                       | 37,123                              |
| 4         | Peak Load Forecast                                    | 33,178                       | 35,488                              | 32,904                       | 34,744                              |
| 5         | Operating Reserve Requirement                         | 2,620                        | 2,620                               | 2,620                        | 2,620                               |
| 6 = 4+5   | Total Capacity Requirement                            | 35,798                       | 38,108                              | 35,524                       | 37,364                              |
| 7 = 3 - 6 | Capacity Margin <sup>3</sup>                          | 386                          | -1,924                              | 1,599                        | -241                                |

- 1. Reflects the 2018 Gold Book existing capacity plus projected additions and deactivations during the summer of 2018 as well as known forced outages
- 2. Derates: 1,418 MW for wind, 505 MW for Hydro, 2,692 MW for thermal units, 70 MW for other renewables and 361 MW for SCRs
- 3. While the assessment shows a deficiency of 241 MW for the 90<sup>th</sup> percentile load forecast, no involuntary load curtailment is forecast to occur because it is expected that there may be up to 3,004 MW available under Emergency Operating Procedures.

1 - All generation capability less known forced outages

#### **2018 Emergency Operating Procedures**

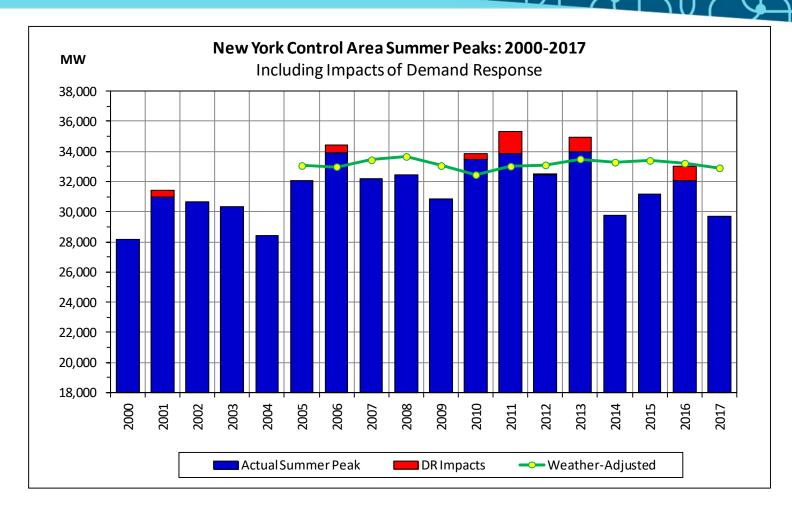

| Procedure                             | Effect  | 2018 MW Value |
|---------------------------------------|---|---------------|
| Emergency Demand<br>Response Programs | Load Impact   | 3             |
| Voltage Reductions                    | Load Impact   | 488           |
| Voluntary Industrial<br>Curtailment   | Load Impact   | 122           |
| General Public Appeals                | Load Impact   | 81            |
| Emergency Purchases                   | Additional Resources  | 1,000         |
| Thirty Minute Reserves to Zero        | Allow Operating Reserve to Decrease to Largest Single Contingency | 1,310         |
| Total Emergency Operating Procedures  |   | 3,004         |

NOTE: Winter dates reflect the first year of the winter season (i.e., 2013-2014).

## The Mission of the New York Independent System Operator is to:

- Serve the public interest and
- Provide benefit to stakeholders by
  - Maintaining and enhancing regional reliability
  - Operating open, fair and competitive wholesale electricity markets
  - Planning the power system for the future
  - Providing factual information to policy makers, stakeholders and investors in the power system
