

April 1, 2020 NYSRC ICS Meeting #230 Report – Ruby Chan
Prepared for the April 9, 2020 EC Meeting

1. High Renewable Intermittent White Paper – See Attachment ICS-1

ICS requests for EC Approval.

2. Status of 2021 IRM study

- a. Data collection is in progress – much of the 2021 study data will become available with the release of the 2020 Gold Book in April.
- b. NYISO presented preliminary transmission topology. Further review and approval from the NYISO TPAS group and ICS will occur before final acceptance.

3. Status on current White Papers

- a. Study Year Issue - Considering two options
 - i. Adopt GE functionality and update the study year (holding the weekday constant)
 - ii. Hold the study year at 2019

NYISO is continuing with the analysis and will provide a recommendation to ICS next month.

- b. Correlation of Intermittent Resources – A draft of the white paper was presented to ICS. ICS is ok with the conclusion and recommendations. The recommendation will include more analysis to include correlation of renewable resources. A revised draft will be presented at the next ICS meeting.
- c. External Areas modeling – Evaluating single external areas for 2022 study
- d. Zonal shift impact to the Tan 45 method – This topic was evolved from the High Renewable Intermittent white paper. Started the discussion during the ICS meeting. A formal white paper scope will be prepared for the next ICS meeting.

4. Proposed Policy 5 revisions – Greg Drake reviewed his proposed edits with ICS and asked the NYISO to review the document. A final revision should be available for EC's review and approval within the next two month.
