

August 5, 2020 NYSRC ICS MEETING #234 Report – Ruby Chan
Prepared for the August 14, 2020 EC Meeting

1. Load Forecast Uncertainty White Paper Scope – See ICS Attachment #1- For EC Approval

This study will focus on long-term temperature and humidity distributions across multiple regions of the New York Control Area. NYISO will analyze and compare the historical distributions between multiple temperature-humidity variables currently used in the LFU modeling.

2. Final Preliminary Base Case Assumptions Matrix – See ICS Attachment #2

- Filled in the estimated impact to IRM column
- Updated summer maintenance recommendation
- Updated EOP (Attachment D)
- Updated SCR (Attachment F)

3. List of Sensitivity cases for IRM Study – See ICS Attachment #3 – For EC Approval

4. Status of 2021 IRM Report

The preliminary parametric study is almost complete. There will be a mid-month conference call on Monday, August 17th to review the parametric study results and the Tan 45 results for the preliminary base case.

5. NYSRC Website

Under Documents>Reports>IRM Model Presentations, a library of presentations were compiled from the last three years. The intent is for new members to learn about the IRM study process and modeling methodology.
