

### **November 27, 2018 NYSRC ICS Meeting Report**

Prepared for the December 7, 2018 NYSRC EC meeting

### **2019-2020 Final IRM Report – Approval sought from EC**

The ICS reviewed and approved the Final IRM Report. The TOs, NYISO and GE completed their review of the model and there were no issues identified that would impact the results.

### **Economic Optimization Methodology LCRs**

The NYISO provided another update of the economic optimization methodology for calculation of the LCRs for 2019. The NYISO still needs to update the Transmission Security Limit floor calculation (based on the December updated load forecast) as well as the Demand Curve parameters(end of November update). The NYISO plans to return in January with a comparison of the Final Base Case indicative LCRs(Tan 45 methodology) to the LCRs determined using the economic optimization methodology.

### **Activities for January 2019**

The ICS will have a new chairman, Howard Kosel, Con Edison, and a new vice chairman/secretary, Akim Faisal, Central Hudson. The ICS plans to have an in-person meeting with discussion on the scope and priority of several topics including the following:

- Determination of the amount of public appeals from TOs
- Updates to external area models (continuation from 2018)
- Load Shape selection (continuation from 2018)
- DER incorporation into the model
- Review of the modeling of current Energy Limited Resources
