

June 23, 2020 NYSRC ICS Meeting #233 Report – Ruby Chan  
Prepared for the July 17, 2020 EC Meeting

1. 2021 Final Preliminary Base Case Assumptions Matrix and 2021 IRM Topology – For EC Approval – see ICS Attachment #1
2. Status of 2021 IRM Study

- a. The parametric study is on-going. NYISO expects to have full results by the next ICS meeting.

Largest change is +0.68 due to load forecast uncertainty (LFU). The LFU change was expected as the distribution widened in all but Zone K.

ICS was concerned with the second year running increase LFU and suggested a review of the data and model entry and having a deeper understanding of the increases.

John Adams is working with the NYISO to develop a scope for an upcoming LFU white paper. The work outlined in the LFU scope will not begin before January 2021 and also will depend on the volume of whitepapers and other studies pursued by EC/ICS.

- b. Sensitivity cases for IRM Study – ICS discussed various sensitivity cases and a finalized list will be prepared next month.
3. Tan 45 presentation – Nate Gilbraith – see ICS Attachment #2
