

September 16, 2020 ICS Meeting #237 and September 29, 2020 ICS Meeting #238  
Prepared for the October 8, 2020 EC Meeting – Ruby Chan

1. Sensitivity Results
  - a. Approved by ICS
  - b. See Attachment 4.1.1 – ***For EC Approval***
2. Fall Load Forecast
  - a. Approved by ICS
  - b. See Attachment 4.1.2 - ***For EC Approval***
3. Final 2021 IRM Base Case Assumption Matrix
  - a. Approved by ICS
  - b. See Attachment 4.1.3 - ***For EC Approval***

4. Status of 2021 IRM Report

- a. Modeling Elected Energy Limited Resources (ELRs)

ICS approved for the 2021 IRM base case, model the elected ELRs using the duration limitations through their operational capabilities and the methodology used in the 2020 IRM study for the battery storage units. This “simplified” modeling would be replaced in the future with the new modeling once it has been verified.

ICS also approved an additional sensitivity case as part of the 2021-2022 IRM using the EL3 and EL4 functions in GE Mars to model the elected ELRs. This additional sensitivity case also helps validating the GE modeling tools which could be used to replace the “simplified” modeling in the future.

- b. First draft of the IRM Report will be available at the November ICS meeting
  - i. Greg Drake will prepare the body of the report
  - ii. John Adams will prepare the appendices
- c. Next month, ICS and EC will approve the 2021 IRM base case
