

NYISO System & Resource Planning Status Report

July 29, 2022

Comprehensive System Planning Process (CSPP):

Reliability Planning Process:

- The NYISO commenced the 2022 Reliability Needs Assessment (“RNA”) in April with completion targeted for November 2022. The RNA baseline evaluation, from which actionable Reliability Needs are identified, considers firm plans for facility additions, modifications, and retirements through 2032. In addition, the NYISO evaluates scenarios to provide information on reliability challenges to better understand the difficult operating conditions expected as the grid transitions to meet state energy policy requirements.
 - **The preliminary results were presented at the July 1 ESPWG and identified potential transmission security related reliability needs. There were no resource adequacy violations identified. The NYISO will provide updated results at the future TPAS/ESWPG meetings, and will present the draft report during the August and September ESPWG/TPAS meetings. The final RNA report is expected to be presented to OC and MC in October, followed by Board review and approval in November. (Updated)**
- **The 2022 Quarter 2 Short-Term Assessment of Reliability (“STAR”) was issued July 14, 2022 and did not identify any needs. The 2022 Quarter 3 STAR commenced on July 15, 2022 and will be issued by October 13, 2022. (Updated)**

Economic Planning Process:

- The NYISO is currently in the final stages of performing the 2021-2040 System & Resource Outlook. The scope of the 2021-2040 System & Resource Outlook includes development of advanced planning models to simulate 20-years of power system and energy market performance, and presentation of analytical findings through a comprehensive report. The Base Case and Contract case results were presented to stakeholders between November 2021 and February 2022. The Policy Case results, which include capacity expansion and production cost modeling, were reported to stakeholders through June 2022. The Outlook has identified numerous transmission needs throughout New York State driven by public policy and economics. The Outlook draft report has been reviewed with stakeholders at ESPWG, will be presented to the BIC, and MC in August 2022, and will be published in Q3 2022. (Current)

Public Policy Transmission Planning Process:

- NextEra Energy Transmission New York, Inc. commenced construction of its Empire State Line Proposal 1 for the Western NY Public Policy Transmission Need in March 2021. The major 345 kV transmission components went into service in May 2022. The remaining network upgrades will enter into service by September 2022. (Current)

- The selected projects for the AC Transmission Public Policy Transmission Needs are a joint proposal by LS Power Grid New York and the New York Power Authority (NYPA) for Segment A (Central East), and a joint proposal by National Grid and New York Transco for Segment B (UPNY/SENY). Construction commenced on both projects in February 2021. The projects are on schedule to commence service in December 2023. (Current)
- On March 18, 2021, the PSC issued an order finding that the state Climate Leadership and Community Protection Act (CLCPA) constitutes a Public Policy Requirement driving the need for:
 - Adding at least one bulk transmission intertie cable to increase the export capability of the LIPA-Con Edison interface, which connects NYISO’s Zone K to Zones I and J, to ensure that the full output from at least 3,000 MW of offshore wind is deliverable from Long Island to the rest of the state; and
 - Upgrading associated local transmission facilities to accompany the expansion of the proposed offshore export capability.

Following completion of baseline and scenario assessments and cases, the NYISO issued the project solicitation in August 2021. The NYISO received 18 Public Policy Transmission Projects and 1 Other Public Policy Project from four developers in October 2021. The NYISO determined that 16 transmission projects are viable and sufficient to fulfill the Long Island Export Need, and filed the Viability and Sufficiency Assessment at the PSC. The developers of all 16 viable and sufficient transmission projects elected to proceed to the next phase of the process where the projects will be evaluated and ranked for efficiency or cost-effectiveness. The NYISO Board of Directors may then select the more efficient or cost-effective transmission solution to meet the Public Policy Transmission Need. (Current)

- Following the issuance of the Outlook, the 2022-2023 cycle of the Public Policy Transmission Planning Process will commence at the end of August 2022 with a request for proposed transmission needs being driven by Public Policy Requirements. Following the 60-day request window, the NYISO will file the proposals with the PSC for their consideration to identify Public Policy Transmission Needs. (Current)

Interregional Planning:

JIPC/IPSAC:

- The Joint ISO/RTO Planning Committee (JIPC) is continuing to exchange data and information, review transmission needs in neighboring regions, review interconnection projects with interregional impacts, and maintain an interregional production cost database. The Interregional Planning Stakeholder Advisory Committee (IPSAC) meeting was held on December 10, 2021.. JIPC members are participating in DOE’s Atlantic Offshore Wind Transmission Study, which started in December. An IPSAC meeting was held on May 16, 2022. **The JIPC posted the final 2021 Northeast Coordinated System Plan in July 2022 after receiving no stakeholder comments on the draft. (Updated)**

EIPC:

- EIPC has issued a white paper on “Planning the Grid for a Renewable Future” that identifies challenges and offers recommendations to ensure the reliability of the transmission grid as system operators work to integrate an increasing level of renewable resources. The paper is posted at:
<https://eipconline.com/s/EIPC-Hi-Renewables-WHITE-PAPER-FINAL-FOR-POSTING-10-5-21.pdf> (Current)
- The Production Cost Task Force (PCTF) and Technical Analysis Working Group (TAWG) continue to evaluate the impacts of a high renewable scenario on generation and transmission performance. (Current)
