Defensive Strategies Report -12/31/2015

The Kalman filter/predictor algorithm has been implemented in PSS/E.

A quick look at one of the extreme contingency results was presented by EnerNex at our web meeting on 12/17/15 - results indicate that the algorithm is working correctly.

Work on the hybrid process involving out of step relay settings continues. EnerNex will be implementing impedance trajectory plots to aid in performance evaluation and determination of settings.

Our next planned web meeting is 1/7/16

George E. Smith, P.E.
