Kevin & Zach.

The NYSRC ad-hoc group copied above plus myself would like to meet with the NYISO to discuss the subject matter. EC's concerns are over the long-range impact of various state environmental initiatives and the the burgeoning interconnection of Inverter Based Resources (solar, wind, storage) on NYCA's long-term resource adequacy.

I suggest the following agenda for your review:

- Changing the current NYSRC "Rule A.3 - Review of Resource Adequacy" from a 3 year to a 10 year look-ahead.
- Relationship to RNA's 10 year resource adequacy studies
- Relationship to NPCC Long-Range Adequacy Overview studies
- Assumptions for the 2020 IRM High Renewable Resources Sensitivity

Please feel free to modify the proposed agenda.

Al, Paul and myself are presently open all day Monday, August 5 and Tuesday, August 6. Please let us know a time and call-in numbers if either of those dates are convenient.

Regards, Roger.

Roger Clayton, P.E.
