## Subject: NYISO Determination of Adverse Material Impact of Modeling Discrepancies

This Technical Bulletin documents the procedure for the NYISO to assess the potential for an adverse material impact of a Market Participant's modeling discrepancy on the reliability of the NYS Bulk Power System pursuant to New York State Reliability Council Rule No. I.4.

---

### Details:

The NYISO is required by New York State Reliability Council Rule No. I.4, Requirement No. 1.7 to assess whether a modeling discrepancy (i.e., data error) provided to the NYISO has the potential to cause an adverse material impact on the reliability of the NYS Bulk Power System.

If the NYISO becomes aware of a discrepancy in modeling data provided by a NYISO Market Participant, including pursuant to Section 2 of the Reliability Analysis Data (RAD) Manual, the discrepancy will be assessed by NYISO staff to determine whether the discrepancy caused a reliability violation on the NYS Bulk Power System, or whether the conclusion of a NYISO planning or operating study change as a result of the data error.

<p>The NYISO anticipates that this Technical Bulletin will be incorporated into the Reliability Analysis Data Manual during its next revision.</p>

---

The purpose of this "Technical Bulletin" is to facilitate participation in the NYISO by communicating various NYISO concepts, techniques, and processes to Market Participants before they can be formally documented in a NYISO manual. The information contained in this bulletin is subject to change as a result of a revision to the ISO Tariffs or a subsequent filed tariff with the FERC.
