1) Roll Call

- Roll call was conducted.

2) Introduction and Request for Additional Agenda Items

- Chair Ruby Chan called the NYSRC ICS meeting to order at 10:00 A.M. on August 17th, 2020.

3) Final SCR registrations and performance –  – Vijay Ganugula

- Mr. Ganugula presented final SCR registration and performance information. No significant event performance changes have been seen in the past several years.

4) High Renewable White Paper Phase II question – K. Osse

- No significant changes are ready to be reported on. Additional Phase II work will be presented at the September 16th 3rd meeting.

Formatted: Superscript

5) Preliminary parametric results – – M. Conway & N. Gilbraith

- Since last presentation, line items 13 and 14 have been updated, including external area adjustments and QA/QC updates. The QA/QC changes included review of the topology run and minor revisions to summer maintenance information.
- Overall preliminary Parametric result is an IRM of 17.9%. Questions were raised on the divergence between the parametric and tan45 analysis results.
- Mr. Gilbraith explained that the results are considered to be accurate and that the parametric results are a rough approximation of IRM factoring in shifting capacity resources, topologies. It's a directional study that provides a year-to-year comparison of the directionality of LCRs and IRM for further review, but it's not intended to be the exact same result as tan45 analysis.
- Mr. Younger recommended doing a tan45 study with the assumption used in Step 8 for comparison of parametric and tan45 results. The Step 9 topology change piece should be broken into 2 analyses, with topology changes studied first and then two tan45 runs for Step 9 (essentially 9A and 9B); a first run just showing transmission topology changes alone and then a 9B run with IPEC3 removed to better understand the solution differences.
- NYISO agreed to perform additional analysis to validate the 2021 IRM PBC Tan45 results.

6) Preliminary Tan 45 IRM Base Case Results – – N. Gilbraith

- Mr. Gilbraith presented the Tan 45 results showing an IRM of 20.1% along with LCR changes. Of note LI LCR's decreased mainly due to improved cable performance and lowered LFU. There were no questions on the results.

7) Summer Maintenance recorded event question – J. Adams

- Mr. Adams presented a brief update on a previous Summer Maintenance event.

8) Voltage Reduction and industrial curtailment question – J. Boles

- Mr. Boles presented a brief update that NYISO Operations is confident in the Voltage Reduction values in the NYISO EOM. Industrial curtailment information was reviewed and ~~ofound no overlap~~ between voluntary industrial curtailment and the SCR program will be investigated. The issue of the additional 50 MW will continue to be reviewed going forward. A previous review circa 2015 found no overlap between voluntary curtailment and the SCR program.

9) Approved PBC assumptions matrix– – M. Conway

- Ms. Conway presented a brief update on the PBC Assumptions matrix, highlighting changes, including small changes to the Ontario import to Zone A .

10) Additional Agenda Items

- It was agreed to keep ICS meeting start times at 10 a.m. going forward.
